Assembly Language

THIS IS A PROCTORED PRACTICAL

YOU MUST SHARE YOUR SCREEN SO YOUR PARTICIPATION IN THIS PRACTICAL **CAN FULLY INVIGILATED**

- 1. Create a Github repository "Assembly_and_C"
- 2. Create a sub directory PRACTICAL ##
- 3. Add Github link to CA Spreadsheet e.g https://STUDENTID.github.com/Assembly and c/PRACTICAL ##
- 4. Invite Lab Supervisors including **MuddyGames** as a collaborators
- 5. Go to designated group to complete practical
- 6. Upload completed Practical files to Github repository

NOTE: Use of EASy68K editor and emulator allowed, use of internet allowed, use of slide deck(s) allowed. Installer located here http://www.easy68k.com/

Create a unique file e.g. practical_##_part#.X68 for each practical section below.

Objective Understand and utilise Conditional Branches and Control Structures:

1 Create a new 68K project and name the file practical_06_part1.X68

> Edit compile and execute the code across and observe while debugging and contents of Data and Address Registers.

Assembly Language

2 Create a new 68K project and name Display string at [A1], D.LW bytes long (max 255) with carriage return and line feed (CR, LF). (see task 13)
Display string at [A1], D.LW bytes long (max 255) without CR, LF, (see task 14)
Read string from keyboard and store at (A1), NULL terminated, length returned in D.LW (max 80)
Display signed number in D.L. In decimal in smallest field. (see task 15 & 20)
Read a number from the keyboard into D.L.
Read single character from the keyboard into D.L.
Display single character in D.L.B.
Set D.L.B. to 1 if keyboard into put is pending, otherwise set to 0.
Use code 15 to read pending key.
Return time in hundredths of a second since midnight in D.L.
Iterminate the program. (Halts the simulator)
The low byte holds the ROW number (0-31).
O,0 is to plet P.31 is the bottom right.
Out of range coordinates are ignored.
Clear Screen: 5 set D.LW to 5 FD0.
Keyboard Echo.
D.L.B. = non zero to enable it (default).
Echo is restored on Reset or when a new file is loaded.
Display the NULL terminated string at (A1) without CR, LF.
Adjust display properties.
D.L.B. a.D. to turn off the visions of the input ground. the file practical_06_part2.X68 Complete code for Trap Tasks as listed here. Display the Nut. terminates some at the Adjust display properties

D1.8 = 0 to turn off the display of the input prompt.

D1.8 = 1 to turn on the display of the input prompt. (default)

D1.8 = 1 do not display a line feed when Enter pressed during Trap task #2 input

D1.8 = 3 display a line feed when Enter key pressed during Trap task #2 input (default)

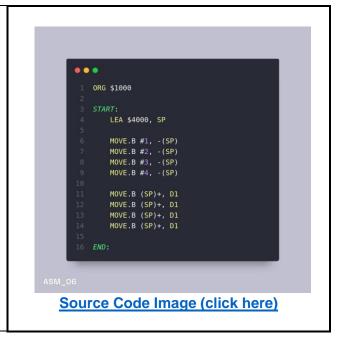

Other values of D1 reserved for future use. Input prompt display is enabled by default and by 'Reset' or when a new file is loaded Combination of Trap codes 14 & 3. Display the NULL terminated string at (A1) without CR, LF then Display the decimal number in D1.L. Combination of Trap codes 14 & 4.
Display the NULL terminated string at (A1) without CR, LF then
Read a number from the keyboard into D1.L. **Trap Codes (click here)** 3 Create a new 68K project and name the file practical_06_part3.X68 Edit compile and execute the code across and observe while debugging ORG \$1000 and contents of memory, data registers and address registers. LEA \$4000, A7 MOVE.B #2, -(A7) MOVE.B #3, -(A7) Review questions, what is the purpose of Address Register A7? MOVE.B #4, -(A7) MOVE.B (A7)+, D1 MOVE.B (A7)+, D1 MOVE.B (A7)+, D1 Source Code Image (click here)

Assembly Language

4 Create a new 68K project and name the file *practical_06_part4.X68*

Edit compile and execute the code across and observe while debugging and contents of memory, data registers and address registers.

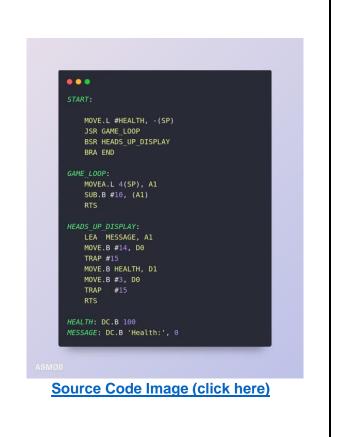

Review questions, what is the purpose of Address Register SP (Stack Pointer)?

Create a new 68K project and designate the file as practical_06_part5.X68.

Review questions parameters to subroutines can be passed through the stack what other functions can be achieved through the stack, what observations have you made when opening VIEW | STACK?

Assembly Language

Create a new 68K project and 6 designate the file practical_06_part6.X68. Review questions moving around . . . stack can be achieved by what means other than push and pop, MOVE.L #HEALTH, -(SP); Note position in Stack what problems could this cause? MOVE.B #14, D0 MOVE.L D0, -(SP) ; Player X MOVE.L D1, -(SP) ; Enemy X JSR GAME_LOOP BSR HEADS_UP_DISPLAY BRA END GAME GAME LOOP: MOVE.L 4(SP), D1 ; Note depth in Stack MOVE.L 8(SP), D0 ; Note depth in Stack BEQ DAMAGE MOVE.B HEALTH, D1 MOVE.B #3, D0 TRAP #15 ; halt simulator HEALTH: DC.B 100 Source Code Image (click here) Complete Practical Quiz which will be provided by Lab Supervisor 7

Demonstrate completed assembly files at the end of the LAB and ensure it has been checked

Student Name	Brandon Jaroszczak	Student Number	C00296052
